

# 15 WAYS TO PROTECT YOUR LAW FIRM FROM A

# CYBER ATTACK!

## SECURITY ASSESSMENT

- It's important to establish a baseline and close existing vulnerabilities. When was your last assessment? Date: \_\_\_\_\_

## SPAM EMAIL

- Secure your email. Most attacks originate in your email. We'll help you choose a service designed to reduce spam and your exposure to attacks on your attorneys and staff via email.

## PASSWORDS

- Apply security policies on your network. Examples: Deny or limit USB file storage access, enable enhanced password policies, set user screen timeouts, and limit user access.

## SECURITY AWARENESS

- Train your users - often! Teach them about data security, email attacks, and your policies and procedures. We offer a web-based training solution and "done for you" security policies.

## ADVANCED ENDPOINT DETECTION & RESPONSE

- Protect your computers data from malware, viruses, and cyber attacks with advanced endpoint security. Today's latest technology (which replaces your outdated anti-virus solution) protects against file-less and script based threats and can even roll a ransomware attack back.

## MULTI-FACTOR AUTHENTICATION

- Utilize multi-factor authentication whenever you can, including on your network, banking websites, and even social media. It adds an additional layer of protection to ensure that even if your password does get stolen, your data stays protected.

## COMPUTER UPDATES

- Keep Microsoft, Adobe, and Java products updated for better security. We provide a "critical update" service to protect your computers from the latest known attacks.

## DARK WEB RESEARCH

- Knowing in real-time what passwords and accounts have been posted on the Dark Web will allow you to be proactive in preventing a data breach. We scan the Dark Web and take action to protect your law firm from stolen credentials that have been posted for sale.

## SIEM/LOG MANAGEMENT

- Uses big data engines to review all event and security logs from all covered devices to protect against advanced threats and to meet compliance requirements.

## WEB GATEWAY SECURITY

- Internet security is a race against time. Cloud based security detects web and email threats as they emerge on the internet, and blocks them on your network within seconds – before they reach the user.

## MOBILE DEVICE SECURITY

- Today's cyber criminals attempt to steal data or access your network by way of your employees' phones and tablets. They're counting on you to neglect this piece of the puzzle. Mobile device security closes this gap.

## FIREWALL

- Turn on Intrusion Detection and Intrusion Prevention features. Send the log files to a managed SIEM. And if your IT team doesn't know what these things are, call us today!

## Did you know?

- 1 IN 5** Small businesses will suffer a cyber breach this year.
- 81%** Of all breaches happen to small and medium sized businesses.
- 97%** Of breaches could have been prevented with today's technology.

## ENCRYPTION

- Whenever possible, the goal is to encrypt files at rest, in motion (think email) and especially on mobile devices.

## BACKUP

- Backup locally. Backup to the cloud. Have an offline backup for each month of the year. Test your backups often. And if you aren't confident your backups are working properly, call us ASAP.

## CYBER INSURANCE

- If all else fails, protect your law firm with cyber damage and recovery insurance policies.
